SIGHTLINES FROM 1ST STOREY MAIN LOUNGE

LIGHTING RENDERING (EXTERIOR NIGHT TIME)

The lighting within the canopy area comprises of two components. The first component is an uplighting to the roof underside while the second is a downlighting to the seating area. The uplights are mounted on the columns above the arches. These serve to provide a gentle illumination to the underside of the ETFE roof creating a soft ambient glow which can be viewed from the Padang. The downlights are mounted on the horizontal roof beam structure. These serve a more functional purpose of illuminating the semi-outdoor dining space. These downlights have been carefully positioned away from the ceiling fans to avoid creating flickering shadows to maintain a pleasant dining experience.

LIGHTING RENDERING (EXTERIOR NIGHT TIME – EVENT DAYS)
